Amendments to the Claims

1. (Currently amended) A short Short repeater rifle comprising:  
with a barrel including first and second ends having a center of length interposed between the first and second ends, which has on one of its ends the first end including a cartridge receiver[[:] and a locking system;  
a trigger assembly with including a trigger and a trigger guard attachable to the short repeater rifle and interposed between the first end and the center of length of the barrel;  
a firing mechanism operably connected to the trigger assembly and interposed between the trigger assembly and the first end of the barrel;  
a magazine engagable with the short repeater rifle between the first end of the barrel and the firing mechanism;  
a weapon base detachably connected to the barrel between the trigger guard and the second end of the barrel; and  
a targeting device detachably connected the barrel proximal to the weapon base, characterized in wherein the weapon base and targeting device are detachably connected to the barrel such that the a center of gravity of the short repeater rifle lies in front of the trigger guard in the a shooting direction.
2. (Cancelled)
3. (Currently amended) Short repeater rifle according to Claim [[2]] 1, characterized in that wherein the detachable connection of the barrel is connected detachably to the weapon base not in front of is interposed between the trigger guard and the center of the length of the barrel in the shooting direction.
4. (Currently amended) Short repeater rifle according to Claim [[2]] 1, characterized in that wherein the barrel is detachably connected to the weapon base by means of a prismatic clamping joint.

5. (Currently amended) Short repeater rifle according to Claim [[2]] 1, characterized in that wherein the barrel is detachably connected to the weapon base by a cylindrical clamping joint.

6. (Currently amended) Short repeater rifle according to Claim [[2]] 1, characterized in that wherein the barrel is detachably connected to the weapon base by a screw connection.

7.-8. (Cancelled)

9. (Original) Short repeater rifle according to Claim 1, characterized in that the trigger is configured as a catch-less toggle lever trigger and the trigger assembly has a trigger lug, which is spatially separated from the toggle lever trigger, which is arranged behind this trigger in the shooting direction, and which is connected to the toggle lever trigger over a connecting rod.

10. (Original) Short repeater rifle according to Claim 1, characterized in that the drive of the firing mechanism is arranged in front of the magazine in the shooting direction.

11. (Original) Short repeater rifle according to Claim 10, characterized in that the firing mechanism has a cocking lever without a catch element.

12. (Original) Short repeater rifle according to Claim 10, characterized in that the firing mechanism has a striker spring, which is configured as a tension spring.

13. (Original) Short repeater rifle according to Claim 12, characterized in that the firing mechanism includes a sliding block with a holding catch, a connecting rod of arbitrary length, and a cocking lever, wherein the trigger assembly and the firing mechanism are configured so that the force of the striker spring is held in the tensioned state by the trigger lug in connection with the sliding block behind the striker spring and the striker spring drives the cocking lever via a connecting rod and also the cocking lever is brought into the striking position for a repeating
